## GEO-XW100 Wire Extensometer

Designed to monitor the changes in distance between two anchor points up to a maximum of 30 metres apart

# GEO-XW100 Wire Extensometer

## Overview

The GEO-XW100 Wire Extensometer is designed to monitor the changes in distance between two anchor points up to a maximum of 30 metres apart.

It comprises a rotary potentiometric displacement gauge, an opposing anchor and a stainless steel wire that runs between the displacement gauge and the opposing anchor. With a wire extension kit, the length of the wire can be extended up to a maximum distance of 30 metres.

The displacement gauge is housed within a rugged steel enclosure with a mounting plate for horizontal or vertical mounting.

Two options for installation are available as follows:

- Exposed wire in combination with expansion anchor and eyebolt typically for attaching to rock or concrete.
- Wire running within a protective sleeve where the bottom anchor is mounted in the bottom cap at the end of the protective sleeve. The protective sleeves can either be mounted on posts above ground or buried typically used for slope and/or landslide monitoring.

### APPLICATIONS

For monitoring large displacements in:

Landslides

Rockfalls

Surface faults

### FEATURES

Displacement range up to 2000mm

Wire extendable up to 30 metres

External sleeve available for environmental and physical protection

Stainless steel support posts available

Simple to install

4-20mA output

Rugged enclosure rated to IP65

# GEO-XW100 Wire Extensometer

## Specifications

### GENERAL

Sensor type	Potentiometric linear transducer
Displacement range	50 to 1000mm
Accuracy	± 1mm (dependent on temperature)
Resolution	Infinite
Nonlinearity	<0.255 FS
Repeatability	± 0.03mm
Power supply	12-30 VDC
Output signal	4-20mA
Displacement gauge wire	0.7mm
Extension wire	1.0mm Ø
Sensor body material	Cast aluminium
Enclosure material	Epoxy coated mild steel
Enclosure rating	IP66
Enclosure dimensions	300 x 200 x 150 mm
Operating temperature	-20°C to +85°C
Weight	4 kg

Typical arrangement for landslide monitoring with wire running in sleeve mounted on posts above ground

Bottom Anchor

GEO-XW Wire Extensometer mounted within enclosure with WI-SOS 480 Node

Geosense Ltd, Nova House, Rougham Industrial Estate, Rougham, Bury St Edmunds, Suffolk IP30 9ND, England
